Angelus Britannicus:

AN

EPHEMERIS

For the Year of our Redemption

1683.

Being the Third after the *Bissextile* or *Leap* Year, and from the Creation of the World, as some suppose, 5632.

And from the Burning of *London* 17.

Amplified with

Astrological Observations from the Sun's Ingress into *ARIES*, and the other Cardinal Points; with an Account of the Eclipses, Conjunctions of the Superiors, of the late Comets, and other Configurations of the Heavenly Bodies.

Calculated for the Meridian of the most famous City of *London* where the Pole Artick is Elevated above the Horizon 51 Degr. 32 Min. but may indifferently serve for *ENGLAND*, *SCOTLAND* and *IRELAND*.

By John Tanner *Student in Physick and Astrology.*

The Twenty seventh Impression.

Agunt non Cogunt.

Astra in Voluntatem hominis & liberum arbitrium indirecte & per accidens agunt; dum directe temperamentum significant & disponunt, sensum in consensum trahunt.

London Printed by *E. Horton*, for the Company of *Stationers* 1683.

According to the Julian, Engliſh Old Account,		According to the Gregorian, Forreign, or New Account,
12	The Golden Number	12
12	The Cycle of the Sun.	12
G	The Dominical Letter	C
12	The Epact.	2
18	The Numb. of Direction.	21

The Names and Characters of the Seven Planets.

Saturn, Jupiter, Mars, Sol, Venus, Mercury, Moon,

♄ ♃ ♂ ☉ ♀ ☿ ☽

Dragons Head and Tail.

☊ ☋

The Names and Characters of the Aſpects.

Sextile, Quartile, Trine, Oppoſition, Conjunction.

ADVERTISEMENT.

THat whereas the Borough of *Agmondeſham* alias *Amerſham* in the County of *Buckingham*, hath anciently had a Market on *Tueſdays*, and two Faits, the one on *Whit-Monday*, and the other on the 8*th*. of *September*; which Market and latter Fair hath for ſome years paſt been decayed and neglected. For the re-eſtabliſhing of which, Sir *William Drake* Lord of the Mannor is upon erecting a new Market-Houſe, both for Corn and the Womens Market, with Shambles and all other neceſſaries for a Market; and is reſolved to aſſiſt the Towns-men of the ſaid Borough, in all things that may contribute to the reſtoring of the ſaid Market, and latter Fair to its priſtine uſage, and doubt not but its conveniencies and ſituation will prove commodious to Buyers and Sellers.

Julian, or Old Account.	Moveable Feasts according to the	Gregorian or New Account.

January hath xxxi days

His Royal Highness of the Heavenly Race
Eclipsed is; the glory of his Face,
Obscur'd by Luna's *dark Body, hence we see*
The brightest lustre is not always free:
But sometimes wears the black upon his brow,
And tallest Cedars sometimes forc't to bow.

Whilst the superiour Stars conjoined be,
Proclaim in Heaven what on the Earth shall be;
The inferiour Stars with friendship do apply,
Soon change, and do oppose them by and by:
Such shifters are below, that can comply,
And answer both the time and Company.

		of this nature falling
		short, mans age not

allowing it. The weather very variable & oft changing.

The inconstancy of man 'tis strange to see,
what contradictions in his actions be;
Sometimes he doth a man with Trophies raise,
Soon after the self-same he doth dispraise:
He cannot in one passion always keep,
He often for one thing rejoice and weep.

But we do hope whilst the Stars do dispence,
Their friendly rayes; their pleasant influence
Will usher in a bounteous fertile Spring,
Which unto Man and Beast doth comfort bring;
Heavens influence inclines, remember still,
'Tis God disposeth all even as he will.

The third Conjunction (shews what's coming on)
This Month bears date; minds us that lately shon
Two stern prodigious Comets in the Skits,
Warning this Age of future miseries:
As if the Heavens plainly declar'd our doom,
And shews us what sad judgments are to come.

The Lions skin can't hide the A[illegible]lars,
All Nations are subjected unto so[illegible]
The imperial Stars the Empire do invade,
And Mars pretends well, yet doth play the jade:
And may he do so, and the world delude,
Till forc't to drink the poison he hath brew'd.

Oh Mars! thy starry quire on thee complain,
Thy deeds, thy words, thy thoughts they are all vain,
Unconstant too; and strange it is to see,
How variable all thy actions be.
Such Men there be, Chamilion like's their mind,
with every object unto change enclin'd.

The cloudy Planet threatens us with rain,
Jove with the Sun doth cle ar the air again:
Saturn and Mars about the Full Moon thunder,
Send fiery beams that cut the clouds in sunder.
The Planets towards the end, do so apply,
As to disturb the Air and cloud the Sky.

September hath xxx days.

Saturn forsaketh Sol his heavenly Court,
And of fair Italy the princely port;
Yet left a large impress, and venom stain,
Twice ten years scarce can wipe it out again.
As craft creeps in to cancel wholesome Laws,
One evil still another forward draws.

Moon's Days.

The Fortunes ſoyn, by their benevolence
The Air's inclin'd to temperature, hence
The Farmer houſeth well his latter grain;
The Seed-man's hopes doth alleviate his pain.
Mars from the Centaure doth create debate,
And beggars ſome that are of great Eſtate.

New sorts and strange Plagues threaten the Earth,
A wonder here, there a prodigious birth;
Comets and threatning Meteors from the skies,
Unheard of sickness, strange calamities:
Racks between hope and fear, that long have been,
Their plagues and sorrows seem but to begin.

The lower Stars upon each other smile,
And may their influx bless our English Isle:
The weather for the season proveth fair,
Sometimes a pleasant and salubrious air.
We hope all's well at home, this we will say,
Nothing but England *England can betray.*

Whilest on the beauteous bounteous Planets rays
My muse her contemplations did raise,
Asked Urania *when the time would be,*
When we more setled peaceful times should see?
She riddled, when the fertile grave doth yield,
The harvest of an ages fallow field.

When you see virtue now shut out o'th' door,
Courted by most; desert, that was so poor,
Rich clad, and in esteem: and honesty,
Hated but now, now in security.
When righteousness and truth each other kiss,
You may expect all good, comfort, and bliss.

ASTROLOGICAL OBSERVATIONS for the year 1683.

Of the Use of the Almanack.

HAving so often explained the Almanack, which in it self is so plain, as needs no Explanation to the Intelligent Reader, I shall therefore be the more concise therein. The Table of Common Notes, and of the Terms, being the next two to the Title-page, needs no Explanation. The next with nine Columns, and two Pages, shews every 5 days of the month, the Suns rising, setting, length of the day, night, Planetary hour, and twilight, and each in a particular Column; which may easily be observed and found by a bare inspection. The next Table contains two pages, and each page 7 Columns, which shews the precise time of the Moons rising and setting, *viz.* from the Change to the Full, the Moons setting; and from the Full to the Change, her rising; the bare inspection thereof, will inform every Reader of a indifferent Capacity; remember that M. stands for morning, and A. afternoon.

The left-hand page of the Almanack hath 11 Columns, which shew the days of the month, Week, Festivals, &c. ♄'s place, ♈, ♂, ☉, ♀, ☿, with the Aspects of the Moon to them, place of the Moon and her Latitude.

The right-hand page hath the Changes, Fulls, Quarters of the *Moon*, the increase and decrease of days, rising and setting of some of the fixed Stars, the Aspects and change of the weather.

The two pages after the Almanack, shew you the time of the *Moons* coming to the South; you may

ceive it by inſpection, taking the day in the firſt Column, and the month at the head; and the common angle ſhews you the time. A. denotes afternoon, M. morning.

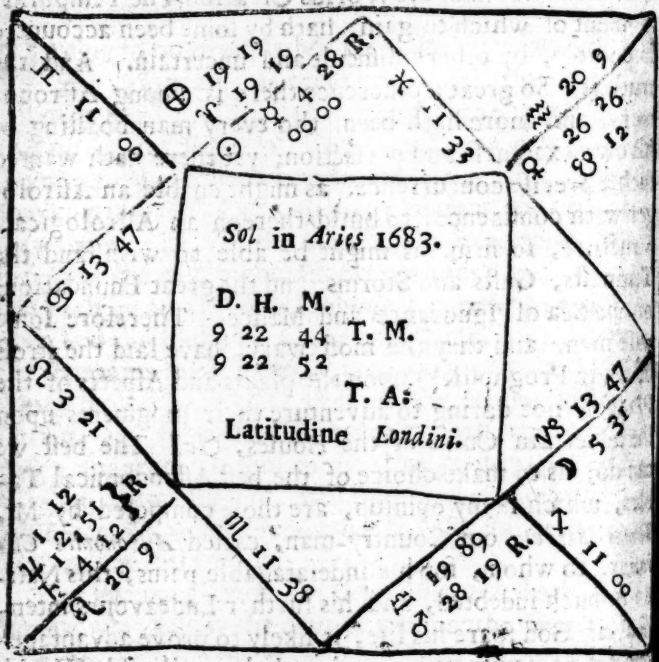
Of the Vernal, or Spring-Quarter.

THE Spring commenceth with the Suns entrance into the firſt Scruple of *Aries*, where it is ſuppoſed he was in the Radix of the Worlds Creation. The Temporary moment of which to gain, hath by ſome been accounted impoſſible, by others difficult and uncertain. And the truth is, So great a difference there is among Aſtronomers, and more hath been, tho every man boaſting of his own exactneſs and perfection; yet there hath wanted ſuch a preciſe concurrence, as might enable an Aſtrologer with confidence, to build thereon an Aſtrological-Structure, ſo firm, as might be able to withſtand the Tempeſts, Guſts and Storms, and the great Enundations of the Sea of Ignorance and Malice. Therefore ſome wiſe men, and they the moſt wary, have laid the ſtreſs of their Prognoſticks upon the places and Aſpects of the Planets, not daring to adventure their Judgments upon the uncertain Cuſps of the Houſes, *&c.* The beſt we can do, is to make choice of the beſt Aſtronomical Tables, which in my opinion, are thoſe compoſed by Mr. *Thomas Street*, our Country-man, called *Aſtronomia Carolina*, to whom, for his indefatigable pains, this Nation is much indebted, and his further Endeavours intended, if God ſpare his life, is likely to prove advantageous, not only unto us, but to the whole intelligible World. The reaſon why he differs ſo much from others (not from truth) in the times of the *Æquinoxes*, is the correction of the Paralax, and Refraction of the Sun, ſince the time of the Noble *Tycho Brahe*, which cauſe a difference ſometimes of 7 or 8 minutes in the Suns place; as he hath given an account in his laſt years *Ephemeris*.

	D.	M.
The right Aſcenſion of time.		
Which is alſo the right Aſcenſion of M.	343	--00.

The Figure followeth. C 2 Mid-

Mid-heaven 10 Degrees 40 Minutes ♒.
Ascendant 16 Degrees 18 Minutes ♊.
According to *Britannica*.
Mid-heaven 2 Degrees 42 Minutes ♒.
Ascendant 6 Degrees 35 Minutes ♊.
By the *Rudolphin*-Tables.



Mid-heaven 12 Degrees 1 Minute ♒.
Ascendant 17 Degrees 47 Minutes ♊.
By *Gadburies* Tables.

You may discern here the difference of the Ascendants according to the several Tables. The Angles are movable and common, and so seem to be the Affairs of most parts of *Europe* in a movable and unsetled condition.

The World labouring under the Influence of a Triple *Conjunction* of the Superiors in the Regal Sign *Leo*, the first in *October* last, the Calculation thereof I gave you in my Almanack of *1679*. the second on the *18th* of *January* last, and the third on *May* the *12th*, 1683. according to *Astronomia Britannica*, which I have calculated by those Tables, supposing Mr. *Street* will give us the time of their Conjunctions by his Tables; which without doubt are the best extant. We labour under the effects of the most prodigious Comet that hath appear'd in this Age. Mr. *Lilly* was of an Opinion, that the restitution of this *Trigon* being the seventh of the *Triplicity*, hath a more secret mystery of Sabbatism, and promiseth something of more singular moment to the World. *Trigonus* ♈, ♌, ♐, *est Christianorum ejus Dominus* ☿, saith *Dasipodius*. The fiery *Trigon* hath relation to the Christians, as our Experience hath proved. And without doubt this *Triple Conjunction* will have great force upon the See of *Rome*, perhaps not to its total subversion, but very great alterations will ensue. *Alstedius* was of this Opinion, That the fire of this *Conjunction*, meaning the restitution of this *Trigon*, will consume the dregs and refuse of *Rome*. He is to be understood, by that time the Superiors have performed their period in this Triplicity, which will be about the year 1801.

It is to be hoped, that this *Conjunction* being in *Trine* to *Englands* Ascendant, may be attended with a benevolent influence to the Nation, especially to the Government thereof. For this *Conjunction* doth naturally signifie the heightning of the honour, and advance of the Princes Prerogative, it being celebrated in the Regal Sign *Leo*, the house of the *Sun*, and in his and *Jupiters* Triplicity, and the part of the Sign in which they make their particular Synods, are adorned with Stars of the nature of *Saturn*, *Mars* and *Mercury*, principally. The *Conjunction* is of the two Superior Planets, who have the

greatest signification of the highest and most sublime matters here below, of the greatest Changes and Accidents that do happen in the World; and all other Celestial Configurations are subordinate to these, and their influences. Seeing it is a *Conjunction* of two, there must be a mixture of both their significations. And first, Care ought to be taken, that a due consideration be had, which is most elevated, which is Superior in his *Eccentrick*, which hath most Essential Dignities in the place of the *Conjunction*, and which hath most fixed Stars in that part of his own nature. *Saturn* is elevated above *Jupiter*, having something more *North-Latitude*; but it is but a very little, as you will perceive by their Calculations. But *Jupiter* is Superior in his *Eccentrick*, being neareſt to his *Aphelion*, and hath most essential Dignities in the place of the *Conjunction*; and the Stars are more of the nature of *Saturn*, than of *Jupiter*. Hence doth appear an intermixture of their influence; yet a Fortune can help little to abate the evil influence of an Infortune, not so much as the Infortune corrupts the good influence of a Fortune, according to the Opinion of *Jerome Cardan*, *Seg.* 5. *Aphor.* 122, 123. Yet *quod ligat Saturnus Jupiter dissolvit*: what *Saturn* binds, *Jupiter* dissolves, and the Fortunes Dignity doth diminish the evil influence of the Infortune, and doth make it more moderate and temperate. *At hæc significatio est super res magnas*, No small, but great matters are signified by these Configurations. Deep Consultations, superlative Transactions, most eminent Intreagues, and the greatest Potentates, and most eminent Grandees in the World concern'd therein. The mischief threatned by *Saturns* Influence, will with great rigour be executed at some times and places, sometimes more remiss, less vigorous or efficacious, by reason of *Jupiters* influence. On the contrary, what good *Jupiters* influence seems to promise, will be remitted, delay'd, or sometimes solely defeated by the malign influence of *Saturn*.

ture. The Sign wherein this *Conjunction* is celebrated, is a fixed Sign; the effects ſeem therefrom to be more durable, and of longer continuance: That the intentions and actions of Monarchs, Princes, Miniſters of State, and Polititians, principally intend and deſign a more firm ſettlement than formerly, of their Empires, Kingdoms, Dominions, Common-wealths, their Laws, Conſtitutions, and Religions. On the contrary, behold as buſie, active and politick a ſort of people, endeavour to unſettle, root out ſeveral Families, Eſtates, Religions, ancient Priviledges, and eſtabliſhed Laws, to the great diſturbance of mankind in general, and the danger of ſhedding much innocent blood in *Chriſtendom*. For a little before the firſt *Conjunction* of theſe three, the Planet *Mars* is in *Conjunction* with *Saturn*, inflaming the blood, and ſtirring up heats in the minds of men, which probably may produce actions of dangerous conſequence, quarrels about Religion, ſtrange Contentions, Mutinies, raſh and unadviſed Actions, Rebellions, Murders. *Rome Italy*, and all places under the Dominion of *Leo*, muſt expect to taſte of its malignant influx, which uſhers in, and aggravates the effects of the three ſucceeding *Conjunctions*. At the two laſt *Conjunctions* *Mars* is in *Libra*, which Sign he vitiates by his tranſit from the 26*th* of *November*, 1682. till the 12*th* of *July* this year, which is of very evil tendency, corrupting the bodies and minds of men, and ſignifieth alſo diſſimulation in Embaſſies and Treaties. The Sign in which they are conjoined, ſignifieth in man, the vital Spirits reſiding in the heart, and diſtributed by the Arteries through the whole body. *Saturn* and *Mars* both vitiating, it is likely to produce a great mortality amongſt mankind, ariſing from ſtrange peſtilential diſtempers, or other Epidemical diſeaſes; from which the Lord deliver our Nation, eſpecially the famous City of *London*.

Saturn hath signification of politick and subtil Councils, deceitful, covetous, and self-ends, slye and cunning Stratagems, destruction of ancient Families, &c. In Ecclesiasticks he hath signification of Hypocrisie, Heresies, Sects, Schisms, Ceremonies, Superstitions, Idolatry, Monkery, Jesuitism, the several Orders of Friers. To Mankind, poverty, want and labour, long lasting diseases, and lingring infirmities, *Gouts*, *lingring Hective-Fevers*, *Catarhs*, *Quartan-Agues*, *Black-Jaundice*, &c. In things natural, he portends want, scarcity, destruction of corn, fruit, cattel; cold, cloudy, misty, foggy weather, sometimes long and tedious frosts, At Sea, Shipwracks, and great disorders. Because he seldom applieth to other Planets, but others apply to him, he signifieth the greatest and most stable Monarchs: he also signifieth the Yeoman, Farmer, and the laborious Country-man. As he is in his *Sall*, and joyned with *Jupiter*, he corrupts his good influence, and signifieth an undermining, deceitful, and sordid sort of people, who lurk in the Courts of Princes, instilling their pernicious Councils; and for their private advantages and profit, endeavour to defeat the most wholesome Councils and designs. We must also consider the nature of *Jupiter*, who signifieth Religion and the Law, with the Professors and Practitioners thereof. He hath signification of men who act with prudence, moderation and sincerity, such as are upright, just and faithful amongst men, that exercise Religion in purity and sincerity of Life and Doctrine; men honoured and reverenced by the People, and such from whom the People may expect new and wholesome Laws, Customs and Priviledges revived and settled. Such a People there are, that labour under great difficulties and discouragements, to shew themselves true Patriots to their King and Country. *Jupiter* is most essentially dignified, and we hope in the conclusion, that the prudent endeavours of those good

men

men signified by him, will at last prevail, and the Enemies of the Government, and established Laws and Religion, the Rights and Priviledges of the Subject, be brought to shame and confusion. *Jupiter* generally signifieth a wholesome and seasonable air, plenty, and an increase of the Fruits of the Earth, prosperity to men in Sea-Voyages, and Land-Journies, and remits the Evils that *Saturn* threatens, or inflicts upon Mortals. *Bonatus* saith, If *Saturn* and *Jupiter* be corporally joyned, men shall operate with much silence, and be very secret in their business; they shall act under a colour of Religion, and pretence of Fidelity, and in observance of the known Laws and Justice. *Haly* saith, When *Jupiter* shall be conjoyned with *Saturn*, it signifieth the Death of some potent King or Prince, and many *Locusts* or *Caterpillars*, or such like Vermine. The two Superiors at the two first of these Conjunctions, are Oriental; soon after the second Conjunction, they are Occidental. *Effectus Planetæ orientalis citò solet apparare, occidentalis tardè.* The Effects of oriental Planets are wont to appear more speedily, than the Effects of occidental Planets, which appear more slowly. Soon after the first Conjunction, the Planets both turn Retrograde, and hath signification of preposterous, strange, and unnatural actions and designs amongst men; but before the last of the three Conjunctions, they become direct again, and men willing to settle and compose the great disorders, and unsetled condition of Church and State. We must consider the Conjunction as it is related to the Vernal Figure, where you will find, by the Figure by *Astronom Carol.* the Superiors or Planets in the second not far elongated from the Cusp of the third. In the Lunation preceding the Conjunction in *October* 1682. they are in the seventh House: but in both the other Lunations in *January* and *May*, they are located as here in the Vernal Figure, *Magna eveniunt juxta Domus naturam*, Great things are signified from the na-

nature of the House. Their subterranean position doth shew the great privacy, subtil and under-hand dealing to obscure the Intrigues and present Affairs now under consideration; which seem principally to be in Negotiations, Embassies, Treaties, making Leagues and Confederacies, and finding out new and unusual ways for the raising of Moneys, and getting supplies for carrying on the great work that is now on foot among several of the Princes of *Europe*. The Superiors are both swift in motion in all the three Conjunctions, espectally that in *October*, which shews the earnest and vehement affections in some, to carry on their private and obscure hatched Designs, with their readiness, and industrious celerity to propagate the same. At the Conjunction in *October*, the Planet *Venus* is in *Trine* for peace, and reconciling of differences, and removing the causes of the sorrow, grief and complaints of the People. Whilst *Mercury* in *Quartile Aspect* doth signifie a froward, libelling, wrangling, contentious sort of people, endeavouring to poison the minds of people, that by their deceitful, crafty, and treacherous designs, endeavour a disturbance, that they may catch fish in those troubled waters, &c. But if you observe how the rest of the Erratick Stars are related to the Conjunction in *January*, you will find *Mars* in *Sextile* to it, which signifieth a great deal of Martial Policy used, or you may call it, if you please, *Treachery*. Soon after the *Sun* is eclipsed in *Opposition*, and *Venus* and *Mercury* in *Opposition* also to the *Conjunction*, which concludes our hopes with force and violence, and a seeming irreconcilable difference on all sides. But at the *Conjunction* in *May*, *Venus Trines* the *Conjunction* from *Aries*, and tho *Mercury* is in *Quartile* before the *Conjunction*, soon after he comes to a *Sextile*. Heavens bless the Endeavours of those honest souls that in sincerity labour for peace and truth, and let every honest man say *Amen*. It is a true saying, *Conjunctiones Saturni & Jovis res mutant*

&

& *convertunt*; the *Conjunctions* of *Saturn* and *Jupiter* do convert and change things: yet it is as certainly true, That *Corpora Cœleſtia non agunt in inſtanti, ſed cum tempore*, the Cœleſtial Bodies do not act in an inſtant, or on a ſudden, but in length of time, and ſome delay. To conclude then (for I have exceeded my bounds), that the ſignification of the ſuperior bodies, are *quædam generalia*, certain genetal things which are ſuddenly to enſue unto mankind; the particular times, things, and perſons, are pointed out by ſucceeding Eclipſes, and other inferior Configurations, as they are related to the great Conjunction, or leſſer Conjunctions of the ſuperior Planets. The times of their Events are not only ſignified by the Conjunctions of *Saturn* and *Jupiter*, but alſo from Eclipſes. Much more might be ſaid, but I will conclude this Diſcourſe with this Aphoriſm of *Daſipodius*. *Conjunctiones magnæ niſi ab Eclipſibus vim recipiant; non ſunt magni faciendæ; ſunt tamen quædam generalia, quæ ex magnis habenter Conjunctionibus.* I ſhall wave any further Obſervations of the Conjunction, and yearly give my further Conceptions, if God ſpare life.

In the Vernal Figure, and preventional full Moon, and poſtventional new Moon, *Jupiter* and *Mars* ſeem to have moſt dignities in the *Helejiacal* places. What the ſignification of *Jupiter* is, I have before hinted: What actions, and what perſons and qualities he ſignifieth, and how and from whom he receives thoſe impediments which hinder the good actions he would promote, *viz.* from *Saturn*, and thoſe ſignified by him; of which I have ſaid enough, conſidering my ſmall ſcantling allowed me. *Mars* we find in *Libra* his *Detriment* and *Retrograde*, having but little fortitude, we muſt expect but little good from his influence: He ſignifieth Military and Martial Affairs, Wars, Commotions, Inſurrections, Perſecutions, Murders and Maſſacres, all manner of Tyranny, Oppreſſion and Villany, firing of Houſes,

Towns

Towns and Cities; and he hath vitiated the sign *Libra*, which is the Emblem of Justice, by almost an eight months transit; It is of an evil and malicious tendency. Pray God deliver our Nation, that it feel not the Effects of its evil influence. But he is in *Opposition* to the *Ascendent* of *England*, and emits his *Quartile* Rays to the *Ascendent* of the Worlds Revolution. When *Mars* shall be infortunate and *malefick*, he signifieth that men shall be disobedient, and rise against their Superiors. *Mars* in a movable Sign, signifieth great strifes and contentions. If he shall be *Retrogradate*, and be in an ill place in the Figure, or in a Sign contrary to his nature, and the Fortunes be not joyned to him, nor aspect him, it signifieth that the Kings Enemies shall be stirred up against him, and raise Forces, and wage War against him. So far, *Haly*. And these Aphorisms are likely to take place in some Kingdoms that seem to be concerned in such like matters. The *Trine* of the Superiors to *England*'s Sign, doth seem to portend much tranquility to the Government thereof, and to their *Allies*. *Bonatus* saith, If *Mars* shall be in the fifth, there shall be many Fornications, and many Children born that year, that many of them shall be *legitimate*, tho spuriously begotten, and great damage to many Families thereby, a thing not very strange in this debauched and corrupt Age. If *Mars* shall be in *Libra*, he signifieth a windy season, infirmities and mortality in the Cities and Countries under the division of *Libra*: And this to happen more among men than women. *Albamasar* saith, That if *Mars* be in *Libra*, he signifieth Rain, and Winds, and Clouds: He signifieth also infirmities and mortality in the *Southern* parts, scarcity of Wine and Water, more than ordinary Thieves and High-way-men; there will be brawling, and many controversies of evil tendency amongst men, great fears and jealousies, a frightful and terrible time. If he hath *North-Latitude*, it signifieth Lightnings and Corrus-

cations,

cations, which ſhall happen and appear in that Year, or in that Revolution. If he ſhall be oriental, he ſignifieth ſtrifes and contentions between the rich and Noblemen. If he be *Retrograde*, he ſignifieth ſickneſs and diſeaſes among the rich and Noble men, among the Judges and wiſe men. So far *Bonatus*. The Moon, Lady of the *Aſcendant*, and in her *Detriment*, and out of her Dignities, ſhews the abject and low condition of the *Farmer*, *Yeoman*, and the meaneſt ſort of people. *Mercury*, Lord of our fifth, being in *Aries* combuſt, preſageth *Fevers*, hot and burning, *Frenzy*, *Madneſs*, &c. *Jupiter*, Lord of the ſixth of the Revolutional Figure in *Leo*, *Small-Pox*, *Meazels*, *Spotted-Fevers*, *Plague* and *Peſtilence*, and the more mortal, being *Jupiter* is afflicted by *Saturn*, Lord of the eighth.

Of the Summer-Quarter.

THE Summer-Quarter commenceth with the Suns entrance into the firſt Scruple of the Tropick of *Cancer*, making the longeſt day in all places on this ſide the *Equator*. It happeneth this year on *Monday* the 11*th* of *June*, at 3 min. paſt noon, by the Tables of Mr. *Street*; Equal time, at which time 41 min. of *Cancer* mediates the Heaven, and 00 degr. 32 min. of the *Ballance* is Horoſcopical. The Moon, *Jupiter* and *Venus* have the Dominion of this Quarter. The moon is eſſentially dignified in her Exaltation, and joyned with *Venus*, fortunately located upon the ninth Houſe, gives great hopes of a better compoſure than heretofore of affairs both in Church and State, a better underſtanding between the Commonalty and their Superiors, and a more readineſs in aſſiſting the Government both with their Perſons and Purſes. Yet ſtill ſome Grandees ſeem to be obnoxious to the People, thereby raiſing ſome animoſities and diſcontents; but much of this ſeems to be raked up in the aſhes of Diſſimulation, Treaties and Pretenſions of Alliances; and tho this be the time of Action, yet much thereof ſeems

ſo

ſo to be ſpent, and people in great hopes at preſent of better times. Nothing talkt of more than Embaſſies, Treaties and Alliances. *Haly* ſays, if the Moon be ſtrong, be in an Angle or ſuccedent Houſe, in her Dignities, and apply likewiſe to a Planet ſtrong and potent, and in his or her Dignities, it ſignifieth, that the people in that year (or quarter), ſhall be in a good ſtate, ſhall be changed from good to good, from one abundance to another, and from gain to gain. If the fortune to whom the Moon ſhall apply, be *Venus*, plenty ſhall abound, great joy, and mirth, and marriages. No wonder in this age, to ſee peace and plenty abaſed, and ſtirring up licentiouſneſs inſtead of a pious gratitude. *Bonatus* ſaith, If the Moon be Lady of the Revolution, and be ſtrong, fortunate, and in a good ſtate, and free from impediment, it ſignifieth good towards the univerſality of the Vulgar. It ſignifieth alſo proſperity to the Mariners, and to Matrons, and ſuch as are imployed in the Education of Youth, to *Epicures*, and gluttonous people, and plenty of ſuch things as delight their pallats. I ſhall paſs by what this Author further obſerves from the Moon thus poſited, rather believing what the ſignification thereof ſeems to be upon thoſe who are leaſt, or ſeem leaſt to be concerned in the eminent and grand mutations that are now acting upon the Stage of the World. He alſo ſaith, That *Venus* in the Ninth, *ſignificat mutationem religioſarum de una menſione in aliam: & ſignificat perigrinationes longinquas*, &c. But whether theſe mutations in Religion, or among religious perſons, may be expected to be manifeſted here, or rather among the *Romans*, let time interpret.

Of the Autumnal-Quarter.

THE Autumnal, or Harveſt-Quarter, begins with the Suns touching the firſt Scruple of *Libra*, or the *Ballance*, being the ſecond *Equinox*, or declining. It happeneth this year *September* the 12*th* day, at half an hour paſt 1 in the morning, by the *Caroline* Tables; at which

which time 24 degr. and 19 min. of the *Ram*, culminates upon the *Mid-heaven*, and 12 degr. 41 min. of the *Lion* ascends the *Horizon* at *London*. In the Autumnal-Figure all the Planets are under the Earth at the preventional New Moon, *Mars* in the ninth in *Quartile* to *Jupiter* in the seventh. Secret Disputations, and close Consultations about Religion, and about Accounts concerning the Treasury, and disbursements thereof, whilst private men discourse thereof more than is needful, and the Press busied therein more than is judged convenient. But *Mars* in *Sagittary* seems at present to rule the Roast. *Mars* signifieth those that have the Conduct of Armies. Therefore if he be in *Quartile of Jupiter*, the Souldiers shall ingage with their Enemies, at some times one with another in the same Army, and destroy one the other, and shall be inclined to run from their Colours, and to revolt and joyn with the Enemies; and if he be infortunate, (as here he is) the Evil seems the greater.

Of the Brumal. or Winter-Quarter.

THE Sun enters the Tropical Sign of *Capricorn* this year, on *Tuesday* the 11*th* of *September* at 2 hours and 47 minutes past noon, making the shortest day to all that inhabit this side of the *Equator*; at which time 9 degr and 17 min. of *Aquary* is upon the *Meridian*, and 14 degr. and 45 min of *Gemini*, or the *Twins*, ascends the *Eastern Finiter*, or *Horoscope* of *London*. *Jupiter* and *Saturn* claim the Dominion of this Quarter, with whom we joyn *Venus*, having Dignities considerable in the *Heylejiacal* places of the three *Brumal* Figures. In the *Tropical* Figure it self the two Superiors are under the Earth in the fifth House. *Venus* just setling in the *West*, *Mars* and the *Moon* in the *Mid-heaven*. We have fresh hopes soon countermined by sudden fears. We hope that the sober well-minded man, or men, will prevail to procure the peace and tranquility good men wish for in *Europe*. On the other hand, we are in continual fears of the

Trea-

Treachery found in Embassies, and seeming friendly Missives, and the double dealing, and under-hand contrivances of a Generation of Vipers, raised and permitted by Gods providence, to be a Plague to the World. The season admits of no great matter of Action; And *Venus* in the seventh, inclines to sports, pleasures and banqueting, masking, and whatever seems to be delightful to a Princes Court. She signifies a mild and temperate weather for the season; no extremity of weather seems to be threatned by the Heavenly influences.

Of the Eclipses happning this Year, 1683.

THere will be three Eclipses this year, one of the Sun, & two of the Moon; but that of the Sun, and only that will be visible to us in *England*. Now an Eclipse of the Sun is occasioned by the dark body of the Moon passing directly between the Sun and us, hiding his body, or rather a part thereof from our sight. Eclipses of the Sun are various in quantity and quality, in their appearance, as they are beheld from several parts of the earth: to some it appears a greater defect, to others inhabiting another part, smaller, to another nothing at all; to one part the defect is upon the *North* side of the Suns body, to another on the *South*, &c.

Amersham in the
County of *Bucks*,
August 18. 168 .

FINIS.

ADVERTISEMENTS.

Tho. Warren, *His Majesties Apothecary in Ordinary, living in* St Lawrence-lane, *near* Cheapside, *preserveth Dead Bodies, without dis-bowelling, Searclothing, mangling or cutting, for as long time as shall be required, having manifested the same to His Majesty, and Physicians, by being the only presenter of a Body so preserved. His Majesty thereupon being well satisfied, was graciously pleased to command the publication thereof for a publick benefit.*

This is to give notice, That all Chymical Medicines now in use, truly prepared, such as are safe, and effectual in operation, and able to abide the most curious Examens, are made and sold by Christopher Pack, *at his house, at the Sign of the Globe and Chymical Furnaces in the* Postern-street *near* Moregate; *where, for satisfaction, any person may have a Catalogue of the same,* gratis.
